PORTFOLIO: <https://parami-kris.github.io/>

PROFESSIONAL SUMMARY

AI and NLP enthusiast with practical experience in LLMs, deep learning, full-stack development. Applied GenAI technologies to solve real-world issues like Alzheimer's prediction and built a natural language interface to query database in real-time via Claude LLM. Proficient in Python, problem-solving, ML deployment, and neural networks. I actively research and experiment with the latest in GenAI and language modeling.

SKILLS AND INTERESTS

Languages: Python, HTML, CSS, TensorFlow, RestAPI, ReactJS(basic), JavaScript(basic)

AI & Data Science: Machine Learning, Deep Learning, Natural Language Processing, LLM, Autoencoders, Computer Vision (YOLO), Time Series (LSTM), Attention Mechanism, Prompt Engineering, Data Visualization, Data mining, Langchain

Tools & Platforms: MySQL, Power BI, Git, KNIME, UiPath-Robotic Process Automation(RPA), AWS

Core CS: Data Structures & Algorithms, API Integration, Object Oriented Programming (OOPs), Software engineering fundamentals

EXTRA-CURRICULARS:

- Participated in various hackathons, organized events in my College Symposium and was a member of the Youth Red Cross (YRC) Club.
- Earned online certifications in Neural Networks, Keras, Robotic Process Automation and NPTEL certifications in Java and IoT.
- Took part in a 20 hour industry supported course for each Deep Learning and KNIME.

WORK EXPERIENCE

AI Intern | Infiswift Technologies | Pune, India | February 2026 - current

- **AI & Document Extraction:** Developed an AI pipeline using LangGraph, Google Gemini, and Docling to automatically parse technical PDF blueprints, extracting complex layout details and text into clean, structured JSON data.
- **Desktop Automation:** Wrote Python automation scripts using Pywinauto and Pandas to programmatically navigate desktop applications and filter data, replacing repetitive manual tasks with a fast, error-free workflow.
- **Cloud & Database Integration:** Connected local automation tools to company infrastructure by writing code to handle automatic AWS S3 uploads and MySQL database connections, while actively collaborating with the engineering team via GitHub

Junior AI Developer | SEnergy | Chennai, India | August 2025 - January 2026

- Developing logic-based Python algorithms and machine learning models for financial trading systems. Responsibilities include data collection, preprocessing, modeling, debugging, backtesting strategies and hyperparameter tuning indicators.
- Employed MySQL through PHPMyAdmin and key-db via Redis for real-time data storage, retrieval, and management.
- Use of APIs to request live trade data and use the response to generate paper trades with a pipeline.

Data Analytics Intern | CoEZET, IIT Madras | Chennai, India | June 2024

- Analyzed 15 months of toll plaza traffic data across India, performing statistical analysis on **big data** to identify top N corridors for introducing zero-emission trucks with **KNIME**.
- Cleaned data by removing outliers and duplicates, applied cross joins to filter plazas based on approximate distances, and visualized traffic distributions by vehicle category using **Power BI**.

Web developer | Sacred Seva Foundation(NGO) | Mumbai, India | December 2023 – March 2024 | (<http://sacredseva.org>)

- Created a functional website for an NGO using ReactJS, CSS that highlights its mission, projects, and initiatives, helping to raise awareness and connect with the community.
- Added interactive features like volunteer sign-up forms, making it easier for people to get involved and support the NGO's work.
- Designed the website to be responsive, user-friendly and easily navigatable, irrespective of the device they use.

Data Science Intern | Infiswift Technologies | Pune, India | June 2023

- Cleaned and preprocessed a large weather dataset using Python, which enhanced data quality for AQI prediction.
 - Trained and evaluated multiple **machine learning models** and performed **hyperparameter tuning** with Randomized Search, achieving a best accuracy (R^2) of 0.62. Created advanced **visualizations** to extract and present key insights from the data.
 - Implemented **YOLO** (You Only Look Once) for real-time object detection in images and videos.
-

ACADEMIC PROJECTS

LLM-Based Dynamic Query Portal for SQL Databases | April 2025- May 2025

- Developed a portal where admins can **retrieve database information** using natural language queries with help of **LLM APIs**, eliminating the need to write SQL manually. Use of LLMOps principles for interaction reliability.
- **Experimented** with Claude and Gemini APIs and explored prompt optimization and response validation.
- Helped admins managing large events flexibly fetch data and perform complex queries using conversational prompts.

Early Detection of Alzheimer's using Deep Learning | August 2024- March 2025

- Collected brain image and biomarker data from ADNI dataset and preprocessed them. Trained and deployed deep learning models for medical diagnostics. Used Streamlit for a front-end UI, simulating real-world application of the model.
 - Built a combined model along with feature extraction with **ResNet** + custom CNN(Convolutional Neural Net) and **Autoencoders** + **MLP** (Multi-Layer Perceptron), trained the model and hypertuned parameters with an accuracy of 83%.
 - Implemented **LSTM** (Progression prediction) + **Attention** Mechanism with accuracy of 86%.
-

EDUCATION

Easwari Engineering College, Anna University | **B.Tech**, Artificial Intelligence and Data Science | Aug 2021- Mar 2025 | **GPA: 8.35/10**

NSN Matriculation Higher Secondary | **12th grade(HSC)**, Computer Science with Physics Chemistry Math | **Percent: 91.3%**

Srimathi Sundaravalli Memorial School | **10th (CBSE)** | **Percent:91.8%**
